LM185QML Adjustable Micropower Voltage References

Check for Samples: LM185QML

FEATURES

- **Adjustable from 1.24V to 5.30V**
- **Operating Current of 10µA to 20mA**
- **1Ω Dynamic Impedance**
- **Low Temperature Coefficient**

DESCRIPTION

The LM185 are micropower 3-terminal adjustable band-gap voltage reference diodes. Operating from 1.24 to 5.3V and over a 10µA to 20mA current range, they feature exceptionally low dynamic impedance and good temperature stability. On-chip trimming is used to provide tight voltage tolerance. Since the LM185 band-gap reference uses only transistors and resistors, low noise and good long-term stability result.

Careful design of the LM185 has made the device tolerant of capacitive loading, making it easy to use in almost any reference application. The wide dynamic operating range allows its use with widely varying supplies with excellent regulation.

The extremely low power drain of the LM185 makes it useful for micropower circuitry. This voltage reference can be used to make portable meters, regulators or general purpose analog circuitry with battery life approaching shelf life. Further, the wide operating current allows it to replace older references with a tighter tolerance part.

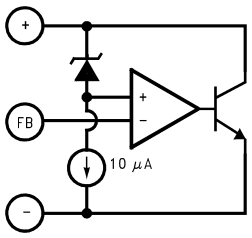
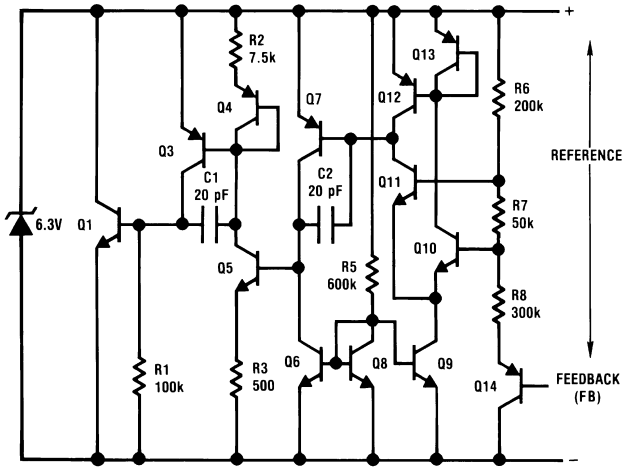
Block Diagram



Schematic Diagram



These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings[1]

Reverse Current			30mA
Forward Current			10mA
Operating Temperature Range			$-55°C \le T_A \le 125°C$
Storage Temperature			$-55°C \le T_A \le 150°C$
Maximum Junction Temperature T_{Jmax}			150°C
Lead Temperature (soldering, 10 seconds)			300°C
Thermal Resistance	θ_{JA}	LCCC Package (Still Air)	100°C/W
		LCCC Package (500LF/Min Air flow)	73°C/W
		Metal Can Package (Still Air)	300°C/W
		Metal Can Package (500LF/Min Air flow)	139°C/W
		CLGA Package (Still Air)	194°C/W
		CLGA Package (500LF/Min Air flow)	128°C/W
	θ_{JC}	LCCC Package	25°C/W
		Metal Can Package	57°C/W
		CLGA Package	23°C/W
Package Weight (Typical)		LCCC Package	TBD
		Metal Can Package	TBD
		CLGA Package	210mg
ESD Tolerance[2]			500V

(1) Absolute Maximum Ratings are limits beyond which damage to the device may occur. Operating Ratings are conditions under which operation of the device is intended to be functional. For guaranteed specifications and test conditions, see the Electrical Characteristics.
(2) Human body model, 1.5 kΩ in series with 100 pF.

(1) Functional test.
(2) The average temperature coefficient is defined as the maximum deviation of reference voltage, at all measured temperatures between the operating T_{Min} & T_{Max}, divided by (T_{Max} − T_{Min}). The measured temperatures ($T_{Measured}$) are −55°C, 25°C, & 125°C or ΔV_{Ref} / (T_{Max} − T_{Min})

REVISION HISTORY SECTION

Released	Revision	Section	Originator	Changes
11/08/05	A	New Release, Corporate format	L. Lytle	2 MDS data sheets converted into one Corp. data sheet format. MNLM185B-X Rev 0B0 and MNLM185BY-X Rev 0B0 will be archived.
04/06/06	B	Ordering Information Table, WG Connection Diagram, Absolute Maximum Ratings Section, Physical Dimensions Section	R. Malone	Added NSID, Connection Diagram, Physical Dimension Dwg, Thermal Resistance and Package Weight for NAC package. Revision A will be Archived.
06/12/08	C	LM185B and LM185BY Electrical Section	Larry McGee	Correct IC test, $V_R = V_{REF}$ condition, subgroup 1, 2, 3 moved limits to the maximum column. Revision B will be Archived.
03/27/13	D	All		Changed layout of National Data Sheet to TI format.

PACKAGING INFORMATION

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
