

TAS2110 具有集成 11V H 类升压功能的 6.1W 数字输入音频 D 类放大器

1 特性

- 主要特性
 - 11V 多电平 H 类升压功能
 - 集成的前向算法附带简单易用的 GUI
- 输出功率 (1% THD+N, VBAT = 3.6V)
 - 为 4Ω 负载提供 6.1W 功率
 - 为 8Ω 负载提供 5W 功率
- 功耗 (8Ω, VBAT = 4.2V)
 - 1W 下效率达 83.5%
 - 硬件关断模式下电流低于 1uA
- 电源
 - VBAT: 2.7V 至 5.5V
 - VDD: 1.65V 至 1.95V
- 保护功能
 - 电池: 高级欠压保护
 - 削波: VBAT 跟踪峰值电压限制器
 - 器件: 热保护和过流保护
- 接口和控制
 - I2S/TDM: 8 个通道 (32 位), 每个通道的运行速率达 96KSPS
 - I2C: 4 个可选择地址
 - 7.35KSPS 至 192KSPS 采样速率
 - 无 MCLK 运行

2 应用

- 智能扬声器 (带语音助理)
- 蓝牙和无线扬声器
- 智能家居
- IP 摄像机

3 说明

TAS2110 是一款在 QFN 封装内具有算法控制、11V H 类升压功能的数字输入 D 类音频放大器。前向算法优化了升压电压电平, 以匹配音频信号的输出。这可以提供峰值输出所需的所有功率, 同时与恒定输出升压相比, 显著降低了平均功耗。这些算法使用 PurePath 控制台 GUI 进行配置。

该 D 类音频放大器能够在 3.6V 的电池电压下向 4Ω 负载提供 6.1W 的峰值功率。TAS2110 在 1W 下的效率为 83.5%, 在硬件关断模式下消耗电流低于 1uA。

TAS2110 通过可配置的欠压保护功能和可配置的 VBAT 跟踪峰值电压限制器, 可帮助防止系统关断。

TAS2110 QFN 封装与 2 层电路板设计兼容。

器件信息(1)

器件型号	封装	封装尺寸 (标称值)
TAS2110	QFN	4.5mm x 4mm

(1) 如需了解所有可用封装, 请参阅数据表末尾的可订购产品附录。

5 Pin Configuration and Functions

**RPP Package
32-Pin QFN
Top View**

Pin Functions

PIN		I/O	DESCRIPTION
NAME	QFN		
AD0	19	I	I2C address pin LSB.
AD1	12	I	I2C address pin LSB+1.
BGND	14	P	Boost ground. Connect to PCB GND plane.
DREG	2	P	Digital core voltage regulator output. Bypass to GND with a cap. Do not connect to external load.
FSYNC	5	IO	I2S word clock or TDM frame sync.
GREG	13	P	High-side gate CP regulator output. Do not connect to external load.
GND	28	P	Digital ground. Connect to PCB GDN plane.
IRQZ	18	O	Open drain, active low interrupt pin. Pull up to VDDD with resistor if optional internal pull up is not used.
GPIO	22	IO	General purpose input/output, no connect if not used.

Pin Functions (continued)

PIN		I/O	DESCRIPTION
NAME	QFN		
NC	1	-	No Connect. Can float or connect to any support or signal.
	8		
	9		
	17		
	23		
	24		
	32		
NC2	20	-	No Connect. Can float or connect to ground. Do not connect to other signals or supplies.
	29		
OUT_N	26	O	Class-D negative output for receiver channel.
OUT_P	21	O	Class-D positive output for receiver channel.
PGND	27	P	Power stage ground. Connect to PCB GND plane.
PVDD	25	P	Power stage supply.
SBCLK	6	IO	I2S/TDM serial bit clock.
SCL	4	I	I ² C Clock Pin. Pull up to VDD with a resistor.
SDA	3	IO	I ² C Data Pin. Pull up to VDD with a resistor.
SDIN	11	I	I2S/TDM serial data input.
SDOUT	10	IO	I2S/TDM serial data output.
SDZ	7	I	Active low hardware shutdown.
SW	15	P	Boost converter switch input.
VBAT	30	P	Battery power supply input. Connect to 2.7 V to 5.5 V supply and decouple with a cap.
VBST	16	P	Boost converter output. Do not connect to external load.
VDD	31	P	Analog, digital, and IO power supply. Connect to 1.8 V supply and decouple to GND with cap.

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) ⁽¹⁾

		MIN	MAX	UNIT
Analog / IO Supply Voltage	VDD	−0.3	2	V
Battery Supply Voltage	VBAT	−0.3	6	V
Boost Pin	VBST ⁽²⁾⁽³⁾	−0.3	18.5	V
Power Supply Voltage	PVDD ⁽²⁾⁽³⁾	−0.3	18.5	V
Switching Pin	SW	−0.7	16	V
High Side Regulator Pin	GREG	PVDD−0.3	PVDD+6	V
Digital Regular Pin	DREG	−0.3	1.65	V
Input voltage ⁽⁴⁾	Digital IOs referenced to VDD supply	−0.3	VDD+0.3	V
Operating free-air temperature, T _A		−40	85	°C
Operating junction temperature, T _J		−40	150	°C
Storage temperature, T _{stg}		−65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* can cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Procedures*. Exposure to absolute-maximum-rated conditions for extended periods can affect device reliability.
- (2) VBST-VBAT and PVDD-VBAT must be less than 16 V
- (3) PVDD can handle 19V transients for less than 10ns
- (4) All digital inputs and IOs are failsafe.

6.2 ESD Ratings

		VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±500

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
VBAT	Supply voltage(Internal Boost Mode)	2.7	3.6	5.5	V
VBAT	Supply voltage(External Boost Mode)	3	3.6	5.5	V
VDD	Supply voltage	1.65	1.8	1.95	V
PVDD	Supply voltage - external boost mode	VBAT		16	V
V _{IH}	High-level digital input voltage		VDD		V
V _{IL}	Low-level digital input voltage		0		V
R _{SPK}	Minimum speaker impedance	3.2			Ω
L _{SPK}	Minimum speaker inductance	10			μH

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		YFP (WCSP)	UNIT
		36 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	47.4	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	17.0	°C/W
R _{θJB}	Junction-to-board thermal resistance	13.1	°C/W
Ψ _{JT}	Junction-to-top characterization parameter	0.5	°C/W
Ψ _{JB}	Junction-to-board characterization parameter	12.7	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	n/a	°C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

6.5 Electrical Characteristics

$T_A = 25\text{ }^{\circ}\text{C}$, $V_{BAT} = 3.6\text{ V}$, (External PVDD = 12 V), $V_{DD} = 1.8\text{ V}$, $R_L = 8\Omega + 33\text{ }\mu\text{H}$, $f_{in} = 1\text{ kHz}$, SSM, $f_s = 48\text{ kHz}$, Gain = 16 dBV (External PVDD Gain=18 dBV), SDZ = 1, Thermal Foldback Disabled, Measured filter free with an Audio Precision with a 22 Hz to 20 kHz un-weighted bandwidth (unless otherwise noted).

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
DIGITAL INPUT and OUTPUT						
V _{IH}	High-level digital input logic voltage threshold	All digital pins except SDA and SCL	0.65 × VDD			V
V _{IL}	Low-level digital input logic voltage threshold	All digital pins except SDA and SCL	0.35 × VDD			V
V _{IH(I2C)}	High-level digital input logic voltage threshold	SDA and SCL	0.7 × VDD			V
V _{IL(I2C)}	Low-level digital input logic voltage threshold	SDA and SCL	0.3 × VDD			V
V _{OH}	High-level digital output voltage	All digital pins except SDA, SCL and IRQZ; I _{OH} = 2 mA.	VDD – 0.45 V			V
V _{OL}	Low-level digital output voltage	All digital pins except SDA, SCL and IRQZ; I _{OL} = –2 mA.	0.45			V
V _{OL(I2C)}	Low-level digital output voltage	SDA and SCL; I _{OL(I2C)} = –2 mA.	0.2 × VDD			V
V _{OL(IRQZ)}	Low-level digital output voltage for IRQZ open drain Output	IRQZ; I _{OL(IRQZ)} = –2 mA.	0.45			V
I _{IH}	Input logic-high leakage for digital inputs	All digital pins; Input = VDD.	–5	0.1	5	μA
I _{IL}	Input logic-low leakage for digital inputs	All digital pins; Input = GND.	–5	0.1	5	μA
C _{IN}	Input capacitance for digital inputs	All digital pins	5			pF
R _{PD}	Pull down resistance for digital input/IO pins when asserted on	SDOUT, SDIN, FSYNC, SBCLK	50			kΩ
AMPLIFIER PERFORMANCE - Internal Boost						
	Output Voltage for Full-scale digital Input	Measured at -6 dB FS input	6.32			Vrms
P _{OUT}	Maximum Continuous Output Power	R _L = 32Ω + 33 μH, THD+N = 0.03 %, f _{in} = 1 kHz	1.25			W
		R _L = 8 Ω + 33 μH, THD+N = 0.03 %, f _{in} = 1 kHz	5			W
		R _L = 4 Ω + 33 μH, THD+N = 1 %, f _{in} = 1 kHz	6.1			W
	System efficiency at P _{OUT} = 1 W	R _L = 8 Ω + 33 μH, f _{in} = 1 kHz	82.5			%
		R _L = 4 Ω + 33 μH, f _{in} = 1 kHz	79.5			%
		R _L = 8 Ω + 33 μH, f _{in} = 1 kHz, VBAT = 4.2 V	83			%
		R _L = 4 Ω + 33 μH, f _{in} = 1 kHz, VBAT = 4.2 V	85.2			%
	System efficiency at P _{OUT} =0.5 W	R _L = 8 Ω + 33 μH, f _{in} = 1 kHz	75.8			%
		R _L = 4 Ω + 33 μH, f _{in} = 1 kHz	80.3			%
		R _L = 8 Ω + 33 μH, f _{in} = 1 kHz, VBAT = 4.2 V	84.9			%
		R _L = 4 Ω + 33 μH, f _{in} = 1 kHz, VBAT = 4.2 V	80.5			%
	System efficiency at 0.1% THD+N power level	R _L = 32 Ω + 33 μH, f _{in} = 1 kHz,	79.1			%
		R _L = 8 Ω + 33 μH, f _{in} = 1 kHz,	81.2			%
		R _L = 4 Ω + 33 μH, f _{in} = 1 kHz	75.7			%
THD+N	Total harmonic distortion + noise	P _{OUT} = 0.25 W, R _L = 32Ω + 33 μH, f _{in} = 1 kHz	0.01			%
		P _{OUT} = 1 W, R _L = 8 Ω + 33 μH, f _{in} = 1 kHz	0.01			%
		P _{OUT} = 1 W, R _L = 4 Ω + 33 μH, f _{in} = 1 kHz	0.01			%
V _N	Idle channel noise	A-Weighted, 20 Hz - 20 kHz, DAC Modulator Running	14.8			μV

Electrical Characteristics (continued)

$T_A = 25\text{ }^{\circ}\text{C}$, $V_{BAT} = 3.6\text{ V}$, (External PVDD = 12 V), $V_{DD} = 1.8\text{ V}$, $R_L = 8\Omega + 33\text{ }\mu\text{H}$, $f_{in} = 1\text{ kHz}$, SSM, $f_s = 48\text{ kHz}$, Gain = 16 dBV (External PVDD Gain=18 dBV), SDZ = 1, Thermal Foldback Disabled, Measured filter free with an Audio Precision with a 22 Hz to 20 kHz un-weighted bandwidth (unless otherwise noted).

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
F _{PWM}	Class-D PWM switching frequency	Average frequency in Spread Spectrum Mode, CLASSD_SYNC=0		384		kHz

7 Parameter Measurement Information

All typical characteristics for the devices are measured using the Bench EVM and an Audio Precision SYS-2722 Audio Analyzer. A PSIA interface is used to allow the I²S interface to be driven directly into the SYS-2722. Speaker output terminals are connected to the Audio-Precision analyzer analog inputs through a differential-to-single ended (D2S) filter as shown below. The D2S filter contains a 1st order Passive pole at 120 kHz. The D2S filter ensures the TAS2110 high performance class-D amplifier sees a fully differential matched loading at its outputs. This prevents measurement errors due to loading effects of AUX-0025 filter on the class-D outputs.

图 32. Differential To Single Ended (D2S) Filter

8 Detailed Description

8.1 Overview

The TAS2110 is a mono digital input Class-D amplifier optimized for mobile applications where efficient battery operation and small solution size are crucial. It integrates battery tracking limiting with brown out prevention.

8.2 Functional Block Diagram

8.3 Feature Description

8.3.1 PurePath™ Console 3 Software

The TAS2110 advanced features and device configuration should be performed using PurePath Console 3 (PPC3) software. The base software PPC3 is downloaded and installed from the TI website. Once installed the TAS2110 application can be download from with-in PPC3. The PCC3 tool will calculate necessary register coefficients that are described in the following sections. It is the recommended method to configure the device. Once the TAS2110 application calculates and updates the device, the registers values can be read back using the PPC3 tool for final system integration.

8.3.2 Device Mode and Address Selection

The TAS2110 can operate using one of four selectable device addresses. In TDM/I²S Mode, audio input and output are provided via the FSYNC, SBCLK, SDIN and SDOUT pins using formats including I²S, Left Justified and TDM. Configuration and status are provided via the SDA and SCL pins using the I²C protocol. 表 1 below illustrates how to select the device I²C address. I²C slave addresses are shown as 7-bit address format.

表 1. I²C Mode Address Selection

I ² C SLAVE ADDRESS	AD1 PIN	AD0 PIN
0x48 (global address)	NA	NA
0x4C	GND	GND
0x4D	GND	VDD
0x4E	VDD	GND
0x4F	VDD	VDD

The TAS2110 has a global 7-bit I²C address 0x48. When enabled the device will additionally respond to I²C commands at this address regardless of the AD1 and AD0 pin settings. This is used to speed up device configuration when using multiple TAS2110 devices and programming similar settings across all devices. The I²C ACK / NACK cannot be used during the multi-device writes since multiple devices are responding to the I²C command. The I²C CRC function should be used to ensure each device properly received the I²C commands. At the completion of writing multiple devices using the global address, the CRC at *I2C_CKSUM* register should be checked on each device using the local address for a proper value. The global I²C address can be disabled using *I2C_GBL_EN* register. The I²C address is detected by sampling the address pins when SDZ pin is released. Additionally, the address may be re-detected by setting *I2C_AD_DET* high after power up and the pins will be resampled.

表 2. I²C Global Address Enable

<i>I2C_GBL_EN</i>	SETTING
0	Disabled
1	Enabled (default)

表 3. I²C Global Address Enable

<i>I2C_AD_DET</i>	SETTING
0	normal (default)
1	Re-detect

8.3.3 General I²C Operation

The I²C bus employs two signals, SDA (data) and SCL (clock), to communicate between integrated circuits in a system using serial data transmission. The address and data 8-bit bytes are transferred most-significant bit (MSB) first. In addition, each byte transferred on the bus is acknowledged by the receiving device with an acknowledge bit. Each transfer operation begins with the master device driving a start condition on the bus and ends with the master device driving a stop condition on the bus. The bus uses transitions on the data terminal (SDA) while the clock is at logic high to indicate start and stop conditions. A high-to-low transition on SDA indicates a start, and a low-to-high transition indicates a stop. Normal data-bit transitions must occur within the low time of the clock period. shows a typical sequence.

The master generates the 7-bit slave address and the read/write (R/W) bit to open communication with another device and then waits for an acknowledge condition. The device holds SDA low during the acknowledge clock period to indicate acknowledgment. When this occurs, the master transmits the next byte of the sequence. Each device is addressed by a unique 7-bit slave address plus R/W bit (1 byte). All compatible devices share the same signals via a bi-directional bus using a wired-AND connection.

Use external pull-up resistors for the SDA and SCL signals to set the logic-high level for the bus. Use pull-up resistors between 2 kΩ and 4.7 kΩ. Do not allow the SDA and SCL voltages to exceed the device supply voltage, . The I²C pins are fault tolerant and will not load the I²C bus when the device is powered down.

图 33. Typical I²C Sequence

There is no limit on the number of bytes that can be transmitted between start and stop conditions. When the last word transfers, the master generates a stop condition to release the bus. 图 33 shows a generic data transfer sequence.

8.3.4 Single-Byte and Multiple-Byte Transfers

The serial control interface supports both single-byte and multiple-byte read/write operations for all registers. During multiple-byte read operations, the TAS2110 responds with data, a byte at a time, starting at the register assigned, as long as the master device continues to respond with acknowledges.

The TAS2110 supports sequential I²C addressing. For write transactions, if a register is issued followed by data for that register and all the remaining registers that follow, a sequential I²C write transaction has taken place. For I²C sequential write transactions, the register issued then serves as the starting point, and the amount of data subsequently transmitted, before a stop or start is transmitted, determines to how many registers are written.

8.3.5 Single-Byte Write

As shown in 图 34, a single-byte data-write transfer begins with the master device transmitting a start condition followed by the I²C device address and the read/write bit. The read/write bit determines the direction of the data transfer. For a write-data transfer, the read/write bit must be set to 0. After receiving the correct I²C device address and the read/write bit, the TAS2110 responds with an acknowledge bit. Next, the master transmits the register byte corresponding to the device internal memory address being accessed. After receiving the register byte, the device again responds with an acknowledge bit. Finally, the master device transmits a stop condition to complete the single-byte data-write transfer.

图 34. Single-Byte Write Transfer

8.3.6 Multiple-Byte Write and Incremental Multiple-Byte Write

A multiple-byte data write transfer is identical to a single-byte data write transfer except that multiple data bytes are transmitted by the master device to the TAS2110 as shown in 图 35. After receiving each data byte, the device responds with an acknowledge bit.

图 35. Multi-Byte Write Transfer

8.3.7 Single-Byte Read

As shown in 图 36, a single-byte data-read transfer begins with the master device transmitting a start condition followed by the I²C device address and the read/write bit. For the data-read transfer, both a write followed by a read are actually done. Initially, a write is done to transfer the address byte of the internal memory address to be read. As a result, the read/write bit is set to a 0.

After receiving the TAS2110 address and the read/write bit, the device responds with an acknowledge bit. The master then sends the internal memory address byte, after which the device issues an acknowledge bit. The master device transmits another start condition followed by the TAS2110 address and the read/write bit again. This time, the read/write bit is set to 1, indicating a read transfer. Next, the TAS2110 transmits the data byte from the memory address being read. After receiving the data byte, the master device transmits a not-acknowledge followed by a stop condition to complete the single-byte data read transfer.

图 36. Single-Byte Read Transfer

8.3.8 Multiple-Byte Read

A multiple-byte data-read transfer is identical to a single-byte data-read transfer except that multiple data bytes are transmitted by the TAS2110 to the master device as shown in 图 37. With the exception of the last data byte, the master device responds with an acknowledge bit after receiving each data byte.

图 37. Multi-Byte Read Transfer

8.3.9 Register Organization

Device configuration and coefficients are stored using a page and book scheme. Each page contains 128 bytes and each book contains 256 pages. All device configuration registers are stored in book 0, page 0, which is the default setting at power up (and after a software reset). The book and page can be set by the *BOOK[7:0]* and *PAGE[7:0]* registers respectively.

8.3.10 Operational Modes

8.3.10.1 Hardware Shutdown

The device enters Hardware Shutdown mode if the SDZ pin is asserted low. In Hardware Shutdown mode, the device consumes the minimum quiescent current from VDD and VBAT supplies. All registers loose state in this mode and I²C communication is disabled.

In normal shutdown mode if SDZ is asserted low while audio is playing, the device will ramp down volume on the audio, stop the Class-D switching, power down analog and digital blocks and finally put the device into Hardware Shutdown mode. If configured in normal with timeout shutdown mode the device will force a hard shutdown after a timeout of the configurable shutdown timer. Finally the device can be configured for hard shutdown and will not attempt to gracefully stop the audio channel.

表 4. Shutdown Control

SDZ_MODE[1:0]	SETTING
00	Normal Shutdown with Timer (default)
01	Immediate Shutdown
10	Normal Shutdown
11	Reserved

表 5. Shutdown Control

SDZ_TIMEOUT[1:0]	SETTING
00	2 ms
01	4 ms
10	6 ms (default)
11	23.8 ms

When SDZ is released, the device will sample the AD0 and AD1 pins and enter the software shutdown mode.

8.3.10.2 Software Shutdown

Software Shutdown mode powers down all analog blocks required to playback audio, but does not cause the device to loose register state. Software Shutdown is enabled by asserting the *MODE[1:0]* register bits to 2'b10. If audio is playing when Software Shutdown is asserted, the Class-D will volume ramp down before shutting down. When deasserted, the Class-D will begin switching and volume ramp back to the programmed digital volume setting.

8.3.10.3 Mute

The TAS2110 will volume ramp down the Class-D amplifier to a mute state by setting the *MODE[1:0]* register bits to 2'b01. During mute the Class-D still switches, but transmits no audio content. If mute is deasserted, the device will volume ramp back to the programmed digital volume setting.

8.3.10.4 Active

In Active Mode the Class-D switches and plays back audio. Speaker voltage and current sensing are operational if enabled. Set the *MODE[1:0]* register bits to 2'b00 to enter active mode.

8.3.10.5 Mode Control and Software Reset

The TAS2110 mode can be configured by writing the *MODE[1:0]* bits.

表 6. Mode Control

MODE[1:0]	SETTING
00	Active
01	Mute

表 6. Mode Control (接下页)

<i>MODE[1:0]</i>	SETTING
10	Software Shutdown (default)
11	Reserved

A software reset can be accomplished by asserting the *SW_RESET* bit, which is self clearing. This will restore all registers to their default values.

表 7. Software Reset

<i>SW_RESET</i>	SETTING
0	Don't reset (default)
1	Reset

8.3.11 Faults and Status

During the power-up sequence, the power-on-reset circuit (POR) monitoring the VDD and VBAT pins will hold the device in reset (including all configuration registers) until the supply is valid. The device will not exit hardware shutdown until VDD and VBAT are valid and the SDZ pin is released. Once SDZ is released, the digital core voltage regulator will power up, enabling detection of the operational mode. If VDD dips below the POR threshold, the device will immediately be forced into a reset state.

The device also monitors the VBAT supply and holds the analog core in power down if the supply is below the UVLO threshold. If the TAS2110 is in active operation and a UVLO fault occurs, the analog supplies will immediately power down to protect the device. These faults are latching and require a transition through HW/SW shutdown to clear the fault. The live and latched registers will report UVLO faults.

The device transitions into software shutdown mode if it detects any faults with the TDM clocks such as:

- Invalid SBCLK to FSYNC ratio
- Invalid FSYNC frequency
- Halting of SBCLK or FSYNC clocks

Upon detection of a TDM clock error, the device transitions into software shutdown mode as quickly as possible to limit the possibility of audio artifacts. Once all TDM clock errors are resolved, the device volume ramps back to its previous playback state. During a TDM clock error, the IRQZ pin will assert low if the clock error interrupt mask register bit is set low (*INT_MASK[2]*). The clock fault is also available for readback in the live or latched fault status registers (*INT_LIVE[2]* and *INT_LTCH[2]*). Reading the latched fault status register (*INT_LTCH[7:0]*) clears the register.

The TAS2110 also monitors die temperature and Class-D load current and will enter software shutdown mode if either of these exceed safe values. As with the TDM clock error, the IRQZ pin will assert low for these faults if the appropriate fault interrupt mask register bit is set low (*INT_MASK[0]* for over temp and *INT_MASK[1]* for over current). The fault status can also be monitored in the live and latched fault registers as with the TDM clock error.

Die over temp and Class-D over current errors can either be latching (for example the device will enter software shutdown until a HW/SW shutdown sequence is applied) or they can be configured to automatically retry after a prescribed time. This behavior can be configured in the *OTE_RETRY* and *OCE_RETRY* register bits (for over temp and over current respectively). Even in latched mode, the Class-D will not attempt to retry after an over temp or over current error until the retry time period (1.5 s) has elapsed. This prevents applying repeated stress to the device in a rapid fashion that could lead to device damage. If the device has been cycled through SW/HW shutdown, the device will only begin to operate after the retry time period.

The status registers (and IRQZ pin if enabled via the status mask register) also indicates limiter behavior including when the limiter is activity, when VBAT is below the inflection point, when maximum attenuation has been applied, when the limiter is in infinite hold and when the limiter has muted the audio.

Interrupts can be queried using the *INT_LIVE[9:0]* and *INT_LTCH[13:0]* registers and correspond to the *INT_MASK[10:0]* Interrupts. The latched registers are cleared by writing the self clearing register *INT_CLR_LTCH* high.

The IRQZ pin is an open drain output that asserts low during unmasked fault conditions and therefore must be pulled up with a resistor to . An internal pull up resistor is provided in the TAS2110 and can be accessed by setting the *IRQZ_PU* register bit high. 图 38 below highlights the IRQZ pin circuit.

图 38. IRQZ Pin

		1	Enabled (default)

8.4 Device Functional Modes

8.4.1 TDM Port

The TAS2110 provides a flexible TDM serial audio port. The port can be configured to support a variety of formats including stereo I²S, Left Justified and TDM. Mono audio playback is available via the SDIN pin. The SDOUT pin is used to transmit sample streams including VBAT voltage, die temperature and channel gain.

Device Functional Modes (接下页)

The TDM serial audio port supports up to 16 32-bit time slots at 44.1/48 kHz, 8 32-bit time slots at a 88.2/96 kHz sample rate and 4 32-bit time slots at a 176.4/192 kHz sample rate. The device supports 2 time slots at 32 bits in width and 4 or 8 time slots at 16, 24 or 32 bits in width. Valid SBCLK to FSYNC ratios are 64, 96, 128, 192, 256, 384 and 512. The device will automatically detect the number of time slots and this does not need to be programmed.

By default, the TAS2110 will automatically detect the PCM playback sample rate. This can be disabled by setting the *AUTO_RATE* register bit high and manually configuring the device.

The *SAMP_RATE* register bits set the PCM audio sample rate when *AUTO_RATE* is enabled. The TAS2110 employs a robust clock fault detection engine that will automatically volume ramp down the playback path if FSYNC does not match the configured sample rate (*AUTO_RATE* enabled) or the ratio of SBCLK to FSYNC is not supported (minimizing any audible artifacts). Once the clocks are detected to be valid in both frequency and ratio, the device will automatically volume ramp the playback path back to the configured volume and resume playback.

When using the auto rate detection the sampling rate and SBCLK to FSYNC ration detected on the TDM bus is reported back on the read-only register *FS_RATE* and *FS_RATIO* respectively.

While the sampling rate of 192 kHz is supported, it is internally down-sampled to 96 kHz. Therefore audio content greater than 40 kHz should not be applied to prevent aliasing. This additionally effects all processing blocks like BOP and limiter which should use 96 kHz fs when accepting 192 kHz audio. It is recommend to use [PurePath™ Console 3 Software](#) to configure the device.

表 16. PCM Auto Sample Rate Detection

<i>AUTO_RATE</i>	SETTING
0	Enabled (default)
1	Disabled

表 17. PCM Audio Sample Rates

<i>SAMP_RATE</i> [2:0]	<i>FS_RATE</i> (read only)	SAMPLE RATE
000	000	7.35kHz / 8 kHz

0xF	Error Condition

图 39 和 图 40 下方 illustrates the receiver frame parameters required to configure the port for playback. A frame begins with the transition of FSYNC from either high to low or low to high (set by the *FRAME_START* register bit). FSYNC and SDIN are sampled by SBCLK using either the rising or falling edge (set by the *RX_EDGE* register bit). The *RX_OFFSET* register bits define the number of SBCLK cycles from the transition of FSYNC until the beginning of time slot 0. This is typically set to a value of 0 for Left Justified format and 1 for an I²S format.

The *RX_SLEN[1:0]* register bits set the length of the RX time slot. The length of the audio sample word within the time slot is configured by the *RX_WLEN[1:0]* register bits. The RX port will left justify the audio sample within the time slot by default, but this can be changed to right justification via the *RX_JUSTIFY* register bit. The TAS2110 supports mono and stereo down mix playback ($(L+R)/2$) via the left time slot, right time slot and time slot configuration register bits (*RX_SLOT_L[3:0]*, *RX_SLOT_R[3:0]* and *RX_SCFG[1:0]* respectively). By default the device will playback mono from the time slot equal to the I²C base address offset for playback. The *RX_SCFG[1:0]* register bits can be used to override the playback source to the left time slot, right time slot or stereo down mix set by the *RX_SLOT_L[3:0]* and *RX_SLOT_R[3:0]* register bits.

If time slot selections places reception either partially or fully beyond the frame boundary, the receiver will return a null sample equivalent to a digitally muted sample.

The TDM port can transmit a number sample streams on the SDOUT pin including, VBAT voltage, die temperature and channel gain. below illustrates the alignment of time slots to the beginning of a frame and how a given sample stream is mapped to time slots. Either the rising or falling edge of SBCLK can be used to transmit data on the SDOUT pin, which can be configured by setting the *TX_EDGE* register bit. The *TX_OFFSET* register defines the number SBCLK cycles between the start of a frame and the beginning of time slot 0. This would typically be programmed to 0 for Left Justified format and 1 for I²S format. The TDM TX can either transmit logic 0 or Hi-Z depending on the setting of the *TX_FILL* register bit setting. An optional bus keeper will weakly hold the state of SDOUT when all devices driving are Hi-Z. Since only one bus keeper is required on SDOUT, this feature can be disabled via the *TX_KEEPCN* register bit. The bus-keeper can additionally be configured to be enabled for only 1LSB cycle or always using *TX_KEEPLN* and to drive the full or half cycle of the LSB using *TX_KEEPCY*.

Each sample stream is composed of either one or two 8-bit time slots.. The VBAT voltage stream is 10-bit precision, and can either be transmitted left justified in a 16-bit word (using two time slots) or can be truncated to 8-bits (the top 8 MSBs) and be transmitted in a single time slot. This is configured by setting *VBAT_SLEN* register bit. The Die temperature and gain are both 8-bit precision and are transmitted in a single time slot.

The time slot register for each sample stream defines where the MSB transmission begins. Each sample stream can be individually enabled or disabled. This is useful to manage limited TDM bandwidth since it may not be necessary to transmit all streams for all devices on the bus.

It is important to ensure that time slot assignments for actively transmitted sample streams do not conflict. This will produce unpredictable transmission results in the conflicting bit slots

If time slot selections place transmission beyond the frame boundary, the transmitter will truncate transmission at the frame boundary.

It is recommended to keep the following slot ordering:

VBAT_SLOT<TEMP_SLOT<GAIN_SLOT.

8.4.2 Playback Signal Path

8.4.2.1 High Pass Filter

Excessive DC and low frequency content in audio playback signal can damage loudspeakers. The TAS2110 employs a high-pass filter (HPF) to prevent this from occurring for the PCM playback path. The HPF can be disabled using register HPF_EN. The HPF Bi-Quad filter coefficients can be changed from the default 2 Hz using the HPFC_N0, HPFC_N1, HPFC_D1 registers using the equation $[N, D] = \text{butter}(1, fc/(fs/2), 'high');$; round($N(0)*2^{31}$);. These coefficients should be calculated and set using [PurePath™ Console 3 Software](#).

表 43. HPF Enable

HPF_EN	STATE
0	Enabled (default)
1	Disabled

8.4.2.2 Digital Volume Control and Amplifier Output Level

The gain from audio input to speaker terminals is controlled by setting the amplifier's output level and digital volume control (DVC).

Amplifier output level settings are presented in dBV (dB relative to 1 V_{rms}) with a full scale digital audio input (0 dBFS) and the digital volume control set to 0 dB. It should be noted that these levels may not be achievable because of analog clipping in the amplifier, so they should be used to convey gain only. 表 44 below shows gain settings that can be programmed via the AMP_LEVEL register.

表 44. Amplifier Output Level Settings

AMP_LEVEL[4:0]	FULL SCALE OUTPUT	
	dBV	V _{PEAK} (V)
0x00	8	3.55
0x01	8.5	3.76
0x02	9	3.99
...	...	...
0x10	16	8.92
...	...	...
0x13	17.5	10.60
0x14	18	11.23
0x15-0x1F	Reserved	Reserved

公式 1 calculates the amplifiers output voltage.

$$V_{AMP} = \text{Input} + A_{dvc} + A_{AMP} \text{ dBV}$$

where

- V_{AMP} is the amplifier output voltage in dBV
- Input is the digital input amplitude in dB with respect to 0 dBFS
- A_{dvc} is the digital volume control setting, 0 dB to -100 dB in 0.5 dB steps
- A_{AMP} is the amplifier output level setting in dBV

(1)

Settings greater than 0xC8 are interpreted as mute. When a change in digital volume control occurs, the device ramps the volume to the new setting based on the DVC_RAMP register bits. If DVC_RAMP is set to 0x0000 0000, volume ramping is disabled. This can be used to speed up startup, shutdown and digital volume changes when volume ramping is handled by the system master.

The digital volume control registers DVC_PCM represent the volume in a 2.X format. To calculate the value to write to these 4 registers apply the following formula to the desired dB DVC_PCM = round($10^{(dB/20)*2^{30}}$).

A volume ramp rate can be set using DVC_RAMP and represents a rate in 1.X format. To calculate the value to write to these 4 registers apply the following formula DVC_RAMP = round($((1 - \exp(-1/(0.2*fs*time \text{ in seconds}))) * 2^{31})$).

表 45. PCM Digital Volume Control

8.4.2.3 Auto-Mute During Idle Channel Mode

Device will stop playing audio if the input audio level drops below the programmable threshold for a programmable timer window. If this behavior is not preferred, threshold level can be kept at very low levels.

8.4.2.4 Auto-Start/Stop on Audio Clocks

The TAS2110 can enter low power software shutdown when the TDM clocks are stopped instead of going into clock error. The device will resume operation when the clocks resume.

8.4.2.5 Supply Tracking Limiters with Brown Out Prevention

The TAS2110 monitors battery voltage (VBAT) and along with the audio signal to automatically decrease gain when the audio signal peaks exceed a programmable threshold. This helps prevent clipping and extends playback time through end of charge battery conditions. The limiters threshold can be configured to track the monitored voltage below a programmable inflection point with a programmable slope. A minimum threshold sets the limit of threshold reduction from the voltage tracking. Configurable attack rate, hold time and release rate are provided to shape the dynamic response of each limiter. If the ICLA is enabled the actual attenuation is based on the ICLA configuration using the calculated attenuation value of all devices on the selected ICLA bus.

图 42. Limiter and Brown Out Prevention Interaction Diagram

A Brown Out Prevention (BOP) feature provides a priority input to provide a fast response to transient dips in the battery supply (VBAT) which at end of charge conditions that can cause system level brown out. When the selected supply dips below the brown-out threshold the BOP will begin reducing gain at a configurable attack rate. When the VBAT supply rises above the brownout threshold, the BOP will begin to release after the programmed hold time. During a BOP event the limiter updates will be paused. This is to prevent a limiter from releasing during a BOP event. The VBAT limiter is enabled by setting the LIMB_EN bit high.

表 47. VBAT Tracking Limiter Enable

<i>LIMB_EN</i>	VALUE
0	Disabled (default)

The limiter has a configurable attack rate, hold time and release rate, which are available via the *LIMB_ATK_RT[2:0]*, *LIMB_HLD_TM[2:0]*, *LIMB_RLS_RT[2:0]* register bits. The limiter attack and release step sizes can be set by configuring the *LIMB_ATK_ST[1:0]* and *LIMB_RLS_ST[1:0]* register bits. The rates are based on the number of audio samples and actual time values can be calculated by multiplying by 1/fs. For example the attack rate of 4 samples at 48 ksps would be approximately 83 μ s.

表 48. Limiter Attack Rate

01	0.5 (default)
10	1
11	2

A maximum level of attenuation applied by the limiters and brown out prevention feature is configurable via the *LIM_MAX_ATN* register. This attenuation limit is shared between the features. For instance, if the maximum attenuation is set to 6 dB and the limiters have reduced gain by 4 dB, the brown out prevention feature will only be able to reduce the gain further by another 2 dB. If the limiter or brown out prevention feature is attacking and it reaches the maximum attenuation, gain will not be reduced any further.

The limiter max attenuation *LIM_MAX_ATN* represent the limit in a 1.X format. To calculate the value to write to the 4 registers by apply the following formula to the desired dB using equation $LIM_MAX_ATN = \text{round}(10^{(-dB/20)*2^{31}})$.

表 53. Limiter Max Attenuation

<i>LIM_MAX_ATN[31:0]</i>	ATTENUATION (dB)
0x7214 82C0	-1
...	...
0x2D6A 866F	-9 (default)
...	...
0x1326 DD71	-16.5

The limiter begins reducing gain when the output signal level is greater than the limiter threshold. The limiter can be configured to track selected supply below a programmable inflection point with a minimum threshold value. 图 43 below shows the limiter configured to limit to a constant level regardless of the selected supply level. To achieve this behavior, set the limiter maximum threshold to the desired level using *LIM_TH_MAX*. Set the limiter inflection point using *LIM_INF_PT* below the minimum allowable supply setting. The limiter minimum threshold register *LIM_TH_MIN* does not impact limiter behavior in this use case.

图 43. Limiter with Fixed Threshold

The VBAT limiter threshold max *LIMB_TH_MAX* and min *LIMB_TH_MIN* registers represent the limit in a 5.X format. To calculate the value to write to the 4 registers by apply the following formula to the desired threshold voltage using the equation *LIMB_TH_MAX* or *LIMB_TH_MIN* = round(Volts*2²⁷).

表 54. VBAT Limiter Maximum Threshold

<i>LIMB_TH_MAX</i> [31:0]	THRESHOLD (V)
0x1400 0000	2.5
...	...
0x4800 0000	9 (default)
...	...
0x7C00 0000	15.5

表 55. VBAT Limiter Minimum Threshold

<i>LIMB_TH_MIN</i> [31:0]	THRESHOLD (V)
0x1400 0000	2.5
...	...
0x2000 0000	4 (default)
...	...
0x7C00 0000	15.5

The VBAT limiter inflection point *LIMB_INF_PT* represent the limit in a format. To calculate the value to write to the 4 registers by apply the following formula to the desired infection voltage using the equation *LIMB_INF_PT* = round(Volts*2⁸).

表 56. VBAT Limiter Inflection Point

<i>LIMB_INF_PT</i> [31:0]	THRESHOLD (V)
0x2000 0000	2
...	...
0x34CC CCCC	3.3 (default)
...	...
0x3000 0000	6

图 44 shows how to configure the limiter to track selected supply below a threshold without a minimum threshold. Set the *LIM_TH_MAX* register to the desired threshold and *LIM_INF_PT* register to the desired inflection point where the limiter will begin reducing the threshold with the selected supply. The default value of 1 V/V will reduce the threshold 1 V for every 1 V of drop in the supply voltage. More aggressive tracking slopes can be programmed if desired. Program the *LIM_TH_MIN* below the minimum the selected supply to prevent the limiter from having a minimum threshold reduction when tracking the selected supply.

The VBAT limiter tracking slope *LIMB_SLOPE*[31:0] represent the limit in a format. To calculate the value to write to the 4 registers by apply the following formula to the desired infection voltage using equation *LIMB_SLOPE* = round(slope(V/V)*2⁸).

图 44. Limiter with Inflection Point

表 57. Limiter VBAT Tracking Slope

$LIMB_SLOPE[31:0]$	SLOPE (V/V)
0x1000 0000	1 (default)
...	...
0x4000 0000	4

To achieve a limiter that tracks the selected supply below a threshold, configure the limiter as explained in the previous example, except program the LIM_TH_MIN register to the desired minimum threshold. This is shown in 图 45 below.

图 45. Limiter with Inflection Point and Minimum Threshold

The TAS2110 also employs a Brown Out Prevention (BOP) feature that serves as a low latency priority input to the limiter engine that begins attacking the VBAT supply dipping below the programmed BOP threshold. This feature can be enabled by setting the *BOP_EN* register bit high. It should be noted that the BOP feature is independent of the limiter and will function if enabled, even if the limiter is disabled. The BOP threshold is configured by setting the threshold with register bits *BOP_TH*.

图 46. Limiter Block Diagram

表 58. Brown Out Prevention Enable

<i>BOP_EN</i>	VALUE
0	Disabled
1	Enabled (default)

The Brownout prevention threshold *BOP_TH* represent a threshold in a 4.X format. To calculate the value to write to the 4 registers by apply the following formula to the desired brownout threshold using equation *BOP_TH* = round(Volts*2²⁸).

表 59. Brown Out Prevention Threshold

<i>BOP_TH</i> [31:0]	VBAT THRESHOLD (V)
0x0000 000 - 0x1FFF FFFF	Reserved
0x2000 0000	2.5

0x2E66 6666	2.9 (default)
...	...
0x2000 0000	4
0x2000 0001 - 0xFFFF FFFF	Reserved

The BOP feature has a separate attack rate *BOP_ATK_RT*, attack step size *BOP_ATK_ST* and hold time *BOP_HLD_TM* from the battery tracking limiter. The BOP feature uses the *LIMB_RLS_RT* register setting to release after a brown out event. The rates are based on the number of audio samples and actual time values can be calculated by multiplying by 1/fs. For example the attack rate of 4 samples at 48 ksps would be approximately 83 μ s.

表 60. Brown Out Prevention Attack Rate

<i>BOP_ATK_RT</i> [2:0]	ATTACK RATE (samples/step)	ATTACK RATE @ 48 ksps (~ μ s)
0x0	1	20
0x1	2	42
0x2	4	83
0x3	8	167
0x4	16	333
0x5	32	666

表 60. Brown Out Prevention Attack Rate (接下页)

<i>BOP_ATK_RT[2:0]</i>	ATTACK RATE (samples/step)	ATTACK RATE @ 48 ksp/s (~μs)
0x6	64	1300
0x7	128	2700

表 61. Brown Out Prevention Attack Step Size

0x5	250
0x6	500 (default)
0x7	1000

The TAS2110 can also shutdown the device when a brown out event occurs if the *BOP_MUTE* register bit is set high. For the device to continue playing audio again, the device must transition through a SW/HW shutdown state. Setting the *BOP_INF_HLD* high will cause the limiter to stay in the hold state (for example never release) after a cleared brown out event until either the device transitions through a mute or SW/HW shutdown state or the register bit *BOP_HLD_CLR* is written to a high value (which will cause the device to exit the hold state and begin releasing). This bit is self clearing and will always readback low. 图 47 below illustrates the entering and exiting from a brown out event.

图 47. Brown Out Prevention Event

表 63. Shutdown on Brown Out Event

<i>BOP_MUTE</i>	VALUE
0	Don't Shutdown (default)
1	Mute then shutdown

表 64. Infinite Hold on Brown Out Event

<i>BOP_INF_HLD</i>	VALUE
0	Use <i>BOP_HLD_TM</i> after Brown Out event (default)
1	Do not release until <i>BOP_HLD_CLR</i> is asserted high

If the TAS2110 is configured to hold the brownout event until cleared the attenuation will remain until *BOP_HLD_CLR* register clear is performed. This should be performed by setting the *BOP_HLR_CLR* bit high, reading the register and then setting the *BOP_HLD_CLR* back to low.

表 65. BOP Infinite Hold Clear

<i>BOP_HLD_CLR</i>	VALUE
0	Don't clear (default)
1	Clear event

A hard brownout level can be set to shutdown the TAS2110 if the BOP cannot mitigate the drop in battery voltage VBAT. This will shutdown the device and should not be used if the *BOP_MUTE* is enable. The brownout shutdown will only function if brownout engine is enabled using *BOP_EN*.

表 66. Brown Out Shutdown Enable

<i>BOSD_EN</i>	VALUE
0	Disabled (default)
1	Enabled

The Brownout prevention shutdown threshold *BOSD_TH* represent a threshold in a 5.X format. To calculate the value to write to the 4 registers by apply the following formula to the desired brownout threshold using equation $BOSD_TH = \text{round}(\text{Volts} \times 2^{27})$.

表 67. Brown Out Shutdown Threshold

...	...
0x3FFF FFFF	3.99

8.4.2.6 Inter Chip Limiter Alignment

8.4.2.6.1 TDM Mode

The TAS2110 supports alignment of limiter (including brown out prevention) dynamics across devices that share the same TDM bus. This ensures consistent gain between channels during limiting or brown out events since these dynamics are dependent on audio content, which can vary across channels. Each device can be configured to align to a specified number of other devices, which allows creation of groupings of devices that align only to each other. All devices in the same group must use the same setting.

Limiter activity is communicated via the limiter gain reduction parameter that can be optionally transmitted by each device on SDOUT in an 8-bit time slot. Gain reduction should be transmitted in adjacent time slots for all devices that are to be aligned beginning with the first slot that is specified by the *ICLA_SLOT* register. The order of the devices is not important as long as they are adjacent. The time slot for limiter gain reduction is configured by the *GAIN_SLOT* register and enabled by the *GAIN_TX* register bit.

The *ICLA_SEN* register specify which time slots should be listened to for gain alignment. This allows any number of devices between two and eight to be grouped together. At least two of these bits should be enabled for alignment to take place. The *ICLA_USE_MAX* register bit determines whether alignment is based on the maximum or minimum gain reduction value from the group of enabled devices. If the *BIL_ICLA_EN* is enabled the # of slots will be double what is selected. For example if time-slot 0,1, and 2 are used for gain alignment. Then time-slots 3, 4, and 5 will be used for brownout-current alignment.

To enable the inter chip limiter alignment feature, the *ICLA_GAIN_EN* register bit should be asserted high and all devices should be configured with identical limiter and brown out prevention settings. Limiter gain reduction transmission should be enabled on all devices as described above.

表 68. Inter Chip Limiter Alignment

		1	Enabled

8.4.2.7 Class-D Settings

The TAS2110 Class-D amplifier supports spread spectrum PWM modulation, which can be enabled by setting the *AMP_SS* register bit high. This can help reduce EMI in some systems.

表 72. Low EMI Spread Spectrum Mode

<i>AMP_SS</i>	SPREAD SPECTRUM
0	Disabled
1	Enabled (default)

By default the Class-D amplifier's switching frequency is based on the device's trimmed internal oscillator. To synchronize switching to the audio sample rate, set the *CLASSD_SYNC* register bit high. When the Class-D is synchronized to the audio sample rate, the *RATE_RAMP* register bit must be set based whether the audio sample rate is based on a 44.1 kHz or 48 kHz frequency. For 44.1, 88.2 and 176.4 kHz, set this bit high. for 48, 96 and 192 kHz, set this bit low. This ensures that the internal ramp generator has the appropriate slope.

表 73. Class-D Synchronization Mode

<i>CLASSD_SYNC</i>	SYNCHRONIZATION MODE
0	Not synchronized to audio clocks (default)
1	Synchronized to audio clocks

表 74. Sample Rate for Class-D Synchronized Mode

<i>RAMP_RATE</i>	PLAYBACK SAMPLE RATE
0	multiples of 48 kHz(default)
1	multiples of 44.1 kHz

8.4.3 SAR ADC

A 10-bit SAR ADC monitors VBAT voltage *VBAT_CNV* and die temperature *TMP_CNV*. VBAT voltage conversions are also used by the limiter and brown out prevention features.

图 48. SAR Block Diagram

Actual VBAT voltage is calculated by dividing the *VBAT_CNV* register by 64. Actual die temperature is calculated by subtracting 93 from *TMP_CNV* register. The battery voltage VBAT can be filtered using *VBAT_FLT* register but will increase the latency. The *VBAT_CNV* registers should be read *VBAT_MSB* followed by *VBAT_LSB*.

表 75. VBAT Filtering

8.4.4 Boost

The TAS2110 internal processing algorithm automatically enables the boost when needed. A look-ahead algorithm monitors the battery voltage and the digital audio stream. When the speaker output approaches the battery voltage the boost is enabled in-time to supply the required speaker output voltage. When the boost is no longer required it is disabled and bypassed to maximize efficiency. The boost can be configured in one of two modes. The first is low in-rush (Class-G) supporting only boost on-off and has the lowest in-rush current. The second is high-efficiency (Class-H) where the boost voltage level is adjusted to a value just above what is needed. This mode is more efficient but has a higher in-rush current to quickly transition the levels. This can be configured using 表 78.

图 49. Boost Mode Signal Tracking Example
表 78. Boost Mode

<i>BST_MODE[1:0]</i>	BOOST MODE
00	Class-H - High efficiency (default)
01	Class-G - Low in-rush
10	Always On
11	Always Off - Pass-through

The boost can be enabled and disabled using *BST_EN* register. When driving the Class-D amplifier using an external supply through the PVDD pin, the boost should be disabled and the VBST pin can be left floating. Do not drive an external voltage on the VBST pin. When supplying an external PVDD voltage the VBAT voltage must also be supplied to the device. While VBAT supply must be present it will not carry current to the speaker load.

表 79. Boost Enable

<i>BST_EN</i>	BOOST IS
0	Disabled
1	Enabled (default)

表 80. Active Mode PFM Lower Frequency Limit

<i>BST_PFML[1:0]</i>	LOWER LIMIT (Hz)
00	No lower limit
01	25 kHz
10	50 kHz (default)
11	100 kHz

The boost has a soft-start to limit in-rush current during the initial charge. The current limit and soft-start timer are configurable to adjust to system component selection.

表 81. Soft-Start Current Limit

<i>BST_SSL[1:0]</i>	CURRENT LIMIT (A)
00	Disabled - Boost Normal Limit
01	1.0 A
10	1.5 A (default)
11	2 A

表 82. Class-G Soft-Start Timer

<i>BST_GSST[1:0]</i>	TIMEOUT (s)
00	1 * BST_HSTT
01	2 * BST_HSTT
10	4 * BST_HSTT(default)
11	8 * BST_HSTT

表 83. Class-H Soft-Start Timer

<i>BST_HSST[3:0]</i>	TIMEOUT (s)
0x0	9 μ S
0x1	18 μ S
0x2	36 μ S
0x3	54 μ S
0x4	72 μ S
0x5	90 μ S
0x6	108 μ S
0x7	135 μ S (default)
0x8	162 μ S
0x9	198 μ S
0xA	252 μ S
0xB	342 μ S
0xC	477 μ S
0xD	612 μ S
0xE	792 μ S
0xF	990 μ S

The boost inductor and decoupling capacitor range needs to be specified using *BST_IR* and *BST_LR* registers. These setting optimize the boost to ensure current limit accuracy and avoid clipping in class-H operation.

表 84. Boost Inductor Range

<i>BST_IR[1:0]</i>	INDUCTANCE (H)
00	< 0.6 μ H
01	0.6 μ H-1.3 μ H (default)
10	1.3 μ H - 2.5 μ H
11	Reserved

表 85. Boost Load Regulation

<i>BST_LR</i>	VALUE
00	Reserved
01	3A/V; load regulation = 1V (default)

表 85. Boost Load Regulation (接下页)

BST_LR	VALUE
10	2A/V; load regulation = 1.5V
11	Reserved

The maximum boost voltage regulation is set by BST_VREG. When operating in class-G mode the boost when needed will be at this voltage. In class-H mode of operation the boost voltage is automatically selected based on the audio signal but, will not exceed this set value.

The peak current limits the boost current drawn from the VBAT supply. This setting allows flexibility in the inductor selection for various saturation currents. The current limit can be adjust in 45 mA steps with register BST_ILIM[5:0]. The peak current limit setting is the maximum and may be temporarily reduced if the and ICLA current limit is active.

表 86. Peak Current Limit

BST_ILIM[5:0]	CURRENT (A)
0x00-0x08	Reserved
0x09	1.48 A
0x0A	1.54 A
...	...
0x36	3.96 A (default)
0x37	4 A
0x38-0x3F	Reserved

For multiple parts the TAS2110 can shift the boost phase to ensure each device will contribute to the load sharing. The boost syncing among multiple devices is enabled using BST_SYNC and then each part is configured to be on 0 or 180 phase using BST_PA. This avoids peak current align on and clock edges and spreads out battery ripple. The phase of additional devices can be set relative to the master using register BST_PA[1:0]. The phase align is performed over the Inter-chip Communication (ICC) bus and a slot for this feature needs to be configured if enabled.

表 87. Boost Sync

BST_SYNC	
0	Not Synced (default)
1	Synced to FSYNC

表 88. Boost Phase

BST_PA[0]	PHASE (Deg)
0	~0° (default)
1	~180°

8.4.5 Clocks and PLL

In TMD/I²C Mode, the device operates from SBCLK. 表 89 和 表 90 below shows the valid SBCLK frequencies for each sample rate and SBCLK to FSYNC ratio (for 44.1 kHz and 48 kHz family frequencies respectively).

If the sample rate is properly configured via the SAMP_RATE[1:0] bits, no additional configuration is required as long as the SBCLK to FSYNC ratio is valid. The device will detect improper SBCLK frequencies and SBCLK to FSYNC ratios and volume ramp down the playback path to minimize audible artifacts. After the clock error is detected the device will enter a low power halt mode after CLK_HALT_TIMER if CLK_HALT_EN is enabled. Additionally the device can automatically power up and down on valid clock signals if CLK_ERR_PWR_EN is set. The device sampling rate should not be changed while this feature is enabled. Additionally, the CLK_HALT_EN should be set when CLK_ERR_PWR_EN is set for this feature to work properly.

表 89. Supported SBCLK Frequencies (48 kHz based sample rates)

SAMPLE RATE (kHz)	SBCLK TO FSYNC RATIO						
	64	96	128	192	256	384	512
16 kHz	1.024 MHz	1.536 MHz	2.048 MHz	3.072 MHz	4.096 MHz	6.144 MHz	8.192 MHz
32 kHz	2.048 MHz	3.072 MHz	4.0960 MHz	6.144 MHz	8.192 MHz	12.288 MHz	16.384 MHz
48 kHz	3.072 MHz	4.608 MHz	6.144 MHz	9.216 MHz	12.288 MHz	18.432 MHz	24.576 MHz

101	209.71 ms
110	419.43 ms
111	838.86 ms

8.4.6 Thermal Foldback

The TAS2110 monitors the die temperature and can automatically limit the audio signal when the die temperature reaches a set threshold. It is recommended to use [PurePath™ Console 3 Software](#) to configure the thermal foldback as the software will perform the necessary math for each register.

Thermal foldback can be disabled using *TF_EN*. If the die temperature reaches *TF_TEMP_TH* this feature will begin to attenuate the audio signal to prevent the device from shutting down due to over-temperature. It will attenuate the audio signal by *TF_LIMS* db per degree of temperature over *TF_TEMP_TH*. The thermal foldback with attack at a fixed rate of 0.25 dB per sample. A maximum attenuation of *TF_MAX_ATTN* can be specified. However if the device continue to heat up eventually the device over-temperature will be triggered. The attenuation will be held for *TF_HOLD_CNT* samples before the attenuation will begin releasing.

表 94. Thermal Foldback Enable

TF_EN	SETTING
0	Disabled
1	Enabled (default)

表 95. Thermal Foldback Registers

REGISTER	DESCRIPTION	CALCULATION
TF_LIMS	Thermal foldback limiter slope (in db/°C)	$\text{round}(10^{(-\text{slope} / 20)} * 2^{31})$
TF_HOLD_CNT	Thermal foldback hold count (samples)	$\text{round}(\text{seconds} * 1000)$
TF_REL_RATE	Thermal foldback limiter release rate (db/samples)	$\text{round}(10^{(\text{dB per sample} / 20)} * 2^{30})$
TF_TEMP_TH	Thermal foldback limiter temperature threshold (°C)	$\text{round}(\text{°C} * 2^{23})$
TF_MAX_ATTN	Thermal foldback max gain reduction (dB)	$\text{round}(10^{(\text{max attn dB} / 20)} * 2^{31})$

8.4.7 Internal Tone Generator

The TAS2110 has two internal tone generators that can be used for pilot tone, ultrasonic tone, or diagnostic purposes. It is recommended to use [PurePath™ Console 3 Software](#) to configure the tone generators as the software will perform the necessary math for each register.

The frequency and amplitude of each generator can be set independently. Each tone generator is enabled using TGx_EN and will soft-ramp to the level set by registers TGx_AMP if corresponding register TGx_SR is set. The frequency using registers TGx_FREQ and amplitude using registers TGx_AMP. These amplitude and frequency should be set only when the tone generator is disabled. Additionally the first tone-generator can be configured to enable and disable the tone using a pin selected by TG1_PINEN pin. When enabled the pin will be logically ORed with the TG1_EN register to play the tone. This can be used for audible diagnostic tones or other alerting functions.

When the tone generator is configured to operate in pin-triggered mode, the sampling rate used in the TG1 equations should be 96 kHz. The range of frequencies that can be generated in this mode is 20 Hz to 38 kHz. For ASI bus sample rates of 192 kHz the tone generator 1 and 2 will run only at 96 kHz and this sampling rate should be used in the calculation. When not in pin trigger TG1 can generate tones up to fs/2.

The max frequency for tone generator 2 is based on the sampling rate and shown in [表 102](#).

表 96. Tone Generator Clock Source

TG_CLK	SETTING
0	External TDM (default)
1	Internal Oscillator

表 97. Tone Generator 1 Enable

TG1_EN	TONE GENERATOR OUTPUT
00	disabled / pin trigger (default)
01	enabled - play tone always

01	SDIN pin
11	AD1 pin

表 99. Tone Generator 1 Soft-Ramp

TG1_SR	SOFT RAMPUP
0	disabled
1	enabled (default)

The pilot tone frequency and amplitude can be programmed using the following register. The equations are used to calculate the register settings for a given gain, frequency, and audio sampling rate.

fc = frequency of the tone

fs = sampling rate

$$TG1_FREQ1[1-4] = 2 * \cos(2 * \pi * fc / fs)$$

$$TG1_FREQ2[1-4] = \sin(2 * \pi * fc / fs)$$

$$TG1_FREQ3[1-4] = (\text{lcm}(fs, fc) / fc) - 1$$

$$TG1_AMP = 10 ^ { (dB/20)}$$

Equations for tone generator 2 are

$$TG2_FREQ1[1-4] = 2 * \cos(2 * \pi * fc / (n*fs))$$

$$TG2_FREQ2[1-4] = \sin(2 * \pi * fc / (n*fs))$$

$$TG2_FREQ3[1-4] = (\text{lcm}(n*fs, fc) / fc) - n$$

$$TG2_AMP = (10 ^ { (dB/20)}) / 4$$

表 100. Tone Generator Defaults

REGISTER	DEFAULT VALUE	DEFAULT REGISTERVALUE

8.5.4 Register Summary Table Page=0x04

Addr	Register	Description	Section
0x00	PAGE4	Device Page	PAGE4 (page=0x04 address=0x00) [reset=0h]
0x18	LD_CFG8	Load Resistance Value after load diagnostics is completed	LD_CFG8 (page=0x04 address=0x18) [reset=0h]
0x19	LD_CFG9	Load Resistance Value after load diagnostics is completed	LD_CFG9 (page=0x04 address=0x19) [reset=0h]
0x1A	LD_CFG10	Load Resistance Value after load diagnostics is completed	LD_CFG10 (page=0x04 address=0x1A) [reset=0h]
0x1B	LD_CFG11	Load Resistance Value after load diagnostics is completed	LD_CFG11 (page=0x04 address=0x1B) [reset=0h]
0x58	TF_CFG4	Thermal foldback hold count (samples)	TF_CFG4 (page=0x04 address=0x58) [reset=0h]
0x59	TF_CFG5	Thermal foldback hold count (samples)	TF_CFG5 (page=0x04 address=0x59) [reset=0h]
0x5A	TF_CFG6	Thermal foldback hold count (samples)	TF_CFG6 (page=0x04 address=0x5A) [reset=0h]
0x5B	TF_CFG7	Thermal foldback hold count (samples)	TF_CFG7 (page=0x04 address=0x5B) [reset=64h]
0x5C	TF_CFG8	Thermal foldback limiter release rate (db/samples)	TF_CFG8 (page=0x04 address=0x5C) [reset=40h]
0x5D	TF_CFG9	Thermal foldback limiter release rate (db/samples)	TF_CFG9 (page=0x04 address=0x5D) [reset=BDh]
0x5E	TF_CFG10	Thermal foldback limiter release rate (db/samples)	TF_CFG10 (page=0x04 address=0x5E) [reset=B7h]
0x5F	TF_CFG11	Thermal foldback limiter release rate (db/samples)	TF_CFG11 (page=0x04 address=0x5F) [reset=B0h]
0x60	TF_CFG12	Thermal foldback limiter temperature threshold	TF_CFG12 (page=0x04 address=0x60) [reset=39h]
0x61	TF_CFG13	Thermal foldback limiter temperature threshold	TF_CFG13 (page=0x04 address=0x61) [reset=82h]
0x62	TF_CFG14	Thermal foldback limiter temperature threshold	TF_CFG14 (page=0x04 address=0x62) [reset=60h]
0x63	TF_CFG16	Thermal foldback limiter temperature threshold	TF_CFG16 (page=0x04 address=0x63) [reset=7Fh]
0x64	TF_CFG17	Thermal foldback max gain reduction (dB)	TF_CFG17 (page=0x04 address=0x64) [reset=2Dh]
0x65	TF_CFG18	Thermal foldback max gain reduction (dB)	TF_CFG18 (page=0x04 address=0x65) [reset=6Ah]
0x66	TF_CFG19	Thermal foldback max gain reduction (dB)	TF_CFG19 (page=0x04 address=0x66) [reset=86h]
0x67	TF_CFG20	Thermal foldback max gain reduction (dB)	TF_CFG20 (page=0x04 address=0x67) [reset=6Fh]

8.5.5 PAGE0 (page=0x00 address=0x00) [reset=0h]

The device's memory map is divided into pages and books. This register sets the page.

Table 104. Device Page Field Descriptions

Bit	Field	Type	Reset	Description
7-0	PAGE[7:0]	RW	0h	Sets the device page. 00h = Page 0 01h = Page 1 ... FFh = Page 255

8.5.6 SW_RESET (page=0x00 address=0x01) [reset=0h]

Asserting Software Reset will place all register values in their default POR (Power on Reset) state.

Table 105. Software Reset Field Descriptions

Bit	Field	Type	Reset	Description
7-1	Reserved	R	0h	Reserved
0	SW_RESET	RW	0h	Software reset. Bit is self clearing. 0b = Don't reset 1b = Reset

8.5.7 PWR_CTL (page=0x00 address=0x02) [reset=Eh]

Sets device's mode of operation and power down of IV sense blocks.

Table 106. Power Control Field Descriptions

Bit	Field	Type	Reset	Description
7	Reserved	R	0h	Reserved
6	LDG_MODE	RW	0h	Load Diagnostic is 0b = Not Running 1b = Running (self clearing)
5	Reserved	RW	0h	Reserved
4	Reserved	RW	0h	Reserved
3	Reserved	RW	1h	Reserved
2	Reserved	RW	1h	Reserved
1-0	MODE[1:0]	RW	2h	Device operational mode. 00b = Active 01b = Mute 10b = Software Shutdown 11b = Load Diagnostics

8.5.8 PB_CFG1 (page=0x00 address=0x03) [reset=20h]

Sets playback high pass filter corner (PCM playback only).

Table 107. Playback Configuration 1 Field Descriptions

Bit	Field	Type	Reset	Description
7	Reserved	R	0h	Reserved
6	HPF_EN	RW	0h	Disable DC Blocker 0b = Enabled 1b = Disabled

Table 107. Playback Configuration 1 Field Descriptions (continued)

Bit	Field	Type	Reset	Description
5-1	AMP_LEVEL[4:0]	RW	10h	15h-1Fh - Reserved 01h = 8.5 dBV(3.76Vpk) 02h = 9.0 dBV(3.99Vpk) 03h = 9.5 dBV(4.22Vpk) 04h = 10.0 dBV(4.47Vpk) 05h = 10.5 dBV(4.74Vpk) 06h = 11.0 dBV (5.02 Vpk) 07h = 11.5 dBV (5.32 Vpk) 08h = 12.0 dBV (5.63 Vpk) 09h = 12.5 dBV (5.96 Vpk) 0Ah = 13.0 dBV (6.32 Vpk) 0Bh = 13.5 dBV (6.69 Vpk) 0Ch = 14.0 dBV (7.09 Vpk) 0Dh = 14.5 dBV (7.51 Vpk) 0Eh = 15.0 dBV (7.95 Vpk) 0Fh = 15.5 dBV (8.42 Vpk) 10h = 16.0 dBV (8.92 Vpk) 11h = 16.5 dBV (9.45 Vpk) 12h = 17.0 dBV (10.01 Vpk) 13h = 17.5 dBV (10.61 Vpk) 14h = 18.0 dBV (11.23 Vpk) 15h = Reserved 16h = Reserved 17h = Reserved 18h = Reserved 19h = Reserved 1Ah = Reserved 1Bh = Reserved 15h-1Fh - Reserved
0	Reserved	RW	0h	Reserved

8.5.9 MISC_CFG1 (page=0x00 address=0x04) [reset=C6h]

Sets OTE/OCE retry, IRQZ pull up, and amp spread spectrum.

Table 108. Misc Configuration 1 Field Descriptions

Bit	Field	Type	Reset	Description
7	Reserved	RW	1h	Reserved
6	Reserved	RW	1h	Reserved
5	OCE_RETRY	RW	0h	Retry after over current event. 0b = Do not retry 1b = Retry after 1.5 s
4	OTE_RETRY	RW	0h	Retry after over temperature event. 0b = Do not retry 1b = Retry after 1.5 s
3	IRQZ_PU	RW	0h	IRQZ internal pull up enable. 0b = Disabled 1b = Enabled
2	AMP_SS	RW	1h	Low EMI spread spectrum enable. 0b = Disabled 1b = Enabled
1-0	Reserved	RW	2h	Reserved

8.5.10 MISC_CFG2 (page=0x00 address=0x05) [reset=22h]

Set shutdown, VBAT filter, and I2C options.

Table 109. Misc Configuration 2 Field Descriptions

Bit	Field	Type	Reset	Description
7-6	SDZ_MODE[1:0]	RW	0h	SDZ Mode configuration. 00b = Initiates normal shutdown; force shutdown after timeout 01b = Immediate force shutdown 10b = Normal shutdown only 11b = Reserved
5-4	SDZ_TIMEOUT[1:0]	RW	2h	SDZ Timeout value 00b = 2 ms 01b = 4 ms 10b = 6 ms 11b = 23.8 ms
3	Reserved	RW	0h	Reserved
2	VBAT_FLT	RW	0h	VBAT filter into SAR ADC. 0b = 100kHz cut off 1b = Bypass
1	I2C_GBL_EN	RW	1h	I2C global address is 0b = Disabled 1b = Enabled
0	I2C_AD_DET	RW	0h	Re-detect I2C slave address (self clearing bit). 0b = normal 1b = Re-detect address

8.5.11 TDM_CFG0 (page=0x00 address=0x06) [reset=9h]

Sets the TDM frame start, TDM sample rate, TDM auto rate detection and whether rate is based on 44.1 kHz or 48 kHz frequency.

Table 110. TDM Configuration 0 Field Descriptions

Bit	Field	Type	Reset	Description
7	Reserved	R	0h	Reserved
6	CLASSD_SYNC	RW	0h	Class-D synchronization mode. 0b = Not synchronized to audio clocks 1b = Synchronized to audio clocks
5	RAMP_RATE	RW	0h	Sample rate based on 44.1kHz or 48kHz when CLASSD_SYNC=1. 0b = 48kHz 1b = 44.1kHz
4	AUTO_RATE	RW	0h	Auto detection of TDM sample rate. 0b = Enabled 1b = Disabled
3-1	SAMP_RATE[2:0]	RW	4h	Sample rate of the TDM bus. 000b = 7.35/8 kHz 001b = 14.7/16 kHz 010b = 22.05/24 kHz 011b = 29.4/32 kHz 100b = 44.1/48 kHz 101b = 88.2/96 kHz 110b = 176.4/192 kHz 111b = Reserved
0	FRAME_START	RW	1h	TDM frame start polarity. 0b = Low to High on FSYNC 1b = High to Low on FSYNC

8.5.12 TDM_CFG1 (page=0x00 address=0x07) [reset=2h]

Sets TDM RX justification, offset and capture edge.

Table 111. TDM Configuration 1 Field Descriptions

Bit	Field	Type	Reset	Description
7	Reserved	R	0h	Reserved
6	RX_JUSTIFY	RW	0h	TDM RX sample justification within the time slot. 0b = Left 1b = Right
5-1	RX_OFFSET[4:0]	RW	1h	TDM RX start of frame to time slot 0 offset (SBCLK cycles).
0	RX_EDGE	RW	0h	TDM RX capture clock polarity. 0b = Rising edge of SBCLK 1b = Falling edge of SBCLK

8.5.13 TDM_CFG2 (page=0x00 address=0x08) [reset=Ah]

Sets TDM RX time slot select, word length and time slot length.

Table 112. TDM Configuration 2 Field Descriptions

Bit	Field	Type	Reset	Description
7-6	Reserved	RW	0h	Reserved
5-4	RX_SCFG[1:0]	RW	0h	TDM RX time slot select config. 00b = Mono with time slot equal to I2C address offset 01b = Mono left channel 10b = Mono right channel 11b = Stereo downmix (L+R)/2
3-2	RX_WLEN[1:0]	RW	2h	TDM RX word length. 00b = 16-bits 01b = 20-bits 10b = 24-bits 11b = 32-bits
1-0	RX_SLEN[1:0]	RW	2h	TDM RX time slot length. 00b = 16-bits 01b = 24-bits 10b = 32-bits 11b = Reserved

8.5.14 TDM_CFG3 (page=0x00 address=0x09) [reset=10h]

Sets TDM RX left and right time slots.

Table 113. TDM Configuration 3 Field Descriptions

Bit	Field	Type	Reset	Description
7-4	RX_SLOT_R[3:0]	RW	1h	TDM RX Right Channel Time Slot.
3-0	RX_SLOT_L[3:0]	RW	0h	TDM RX Left Channel Time Slot.

8.5.15 TDM_CFG4 (page=0x00 address=0x0A) [reset=13h]

Sets TDM TX bus keeper, fill, offset and transmit edge.

Table 114. TDM Configuration 4 Field Descriptions

Bit	Field	Type	Reset	Description
7	TX_KEEPCY	RW	0h	TDM TX SDOUT LSB data will be driven for 0b = full-cycle 1b = half-cycle
6	TX_KEEPLN	RW	0h	TDM TX SDOUT will hold the bus for the following when TX_KEEPCY is enabled 0b = 1 LSB cycle 1b = always

Table 114. TDM Configuration 4 Field Descriptions (continued)

Bit	Field	Type	Reset	Description
5	TX_KEEPE	RW	0h	TDM TX SDOOUT bus keeper enable. 0b = Disable bus keeper 1b = Enable bus keeper
4	TX_FILL	RW	1h	TDM TX SDOOUT unused bitfield fill. 0b = Transmit 0 1b = Transmit Hi-Z
3-1	TX_OFFSET[2:0]	RW	1h	TDM TX start of frame to time slot 0 offset.
0	TX_EDGE	RW	1h	TDM TX launch clock polarity. 0b = Rising edge of SBCLK 1b = Falling edge of SBCLK

8.5.16 TDM_CFG7 (page=0x00 address=0x0D) [reset=4h]

Sets TDM TX VBAT time slot and enable.

Table 115. TDM Configuration 7 Field Descriptions

Bit	Field	Type	Reset	Description
7	VBAT_SLEN	RW	0h	TDM TX VBAT time slot length. 0b = Truncate to 8-bits 1b = Left justify to 16-bits
6	VBAT_TX	RW	0h	TDM TX VBAT transmit enable. 0b = Disabled 1b = Enabled
5-0	VBAT_SLOT[5:0]	RW	4h	TDM TX VBAT time slot.

8.5.17 TDM_CFG8 (page=0x00 address=0x0E) [reset=5h]

Sets TDM TX temp time slot and enable.

Table 116. TDM Configuration 8 Field Descriptions

Bit	Field	Type	Reset	Description
7	Reserved	R	0h	Reserved
6	TEMP_TX	RW	0h	TDM TX temp sensor transmit enable. 0b = Disabled 1b = Enabled
5-0	TEMP_SLOT[5:0]	RW	5h	TDM TX temp sensor time slot.

8.5.18 TDM_CFG9 (page=0x00 address=0x0F) [reset=6h]

Sets ICLA bus, TDM TX limiter gain reduction time slot and enable.

Table 117. TDM Configuration 9 Field Descriptions

Bit	Field	Type	Reset	Description
7	Reserved	R	0h	Reserved
6	GAIN_TX	RW	0h	TDM TX limiter gain reduction transmit enable. 0b = Disabled 1b = Enabled
5-0	GAIN_SLOT[5:0]	RW	6h	TDM TX limiter gain reduction time slot.

8.5.19 TDM_CFG10 (page=0x00 address=0x10) [reset=7h]

Sets boost current limiter slot and enable

Table 118. TDM Configuration 10 Field Descriptions

Bit	Field	Type	Reset	Description
7	BST_TX	RW	0h	TDM TX boost current limiter enable. 0b = Disabled 1b = Enabled
6	BST_SYNC_TX	RW	0h	TDM TX boost clock sync enable. 0b = Disabled 1b = Enabled
5-0	BST_SLOT[5:0]	RW	7h	TDM TX boost sync and current limit time slot.

8.5.20 TDM_DET (page=0x00 address=0x11) [reset=7Fh]

Readback of internal auto-rate detection.

Table 119. TDM Clock detection monitor Field Descriptions

Bit	Field	Type	Reset	Description
7	Reserved	R	0h	Reserved
6-3	FS_RATIO[3:0]	R	Fh	Detected SBCLK to FSYNC ratio. 00h = 16 01h = 24 02h = 32 03h = 48 04h = 64 05h = 96 06h = 128 07h = 192 08h = 256 09h = 384 0Ah = 512 0Bh-0Eh = Reserved 0F = Invalid ratio
2-0	FS_RATE[2:0]	R	7h	Detected sample rate of TDM bus. 000b = 7.35/8 KHz 001b = 14.7/16 KHz 010b = 22.05/24 KHz 011b = 29.4/32 KHz 100b = 44.1/48 KHz 101b = 88.2/96 KHz 110b = 176.4/192 KHz 111b = Error condition

8.5.21 LIM_CFG_0 (page=0x00 address=0x12) [reset=12h]

Sets Limiter attack step size, attack rate and enable.

Table 120. Limiter Configuration 0 Field Descriptions

Bit	Field	Type	Reset	Description
7	Reserved	R	0h	Reserved
6	VBAT_LIM_TH_SELECTION	RW	0h	Select source of threshold for VBAT based limiting 0b = User configured Thresholds 1b = PVDD based thresholds
5-4	LIMB_ATK_ST[1:0]	RW	1h	VBAT Limiter/ICLA attack step size. 00b = 0.25 dB 01b = 0.5 dB 10b = 1 dB 11b = 2 dB

Table 120. Limiter Configuration 0 Field Descriptions (continued)

Bit	Field	Type	Reset	Description
3-1	LIMB_ATK_RT[2:0]	RW	1h	VBAT Limiter/ICLA attack rate. 000b = 1 step in 1 sample 001b = 1 step in 2 samples 010b = 1 step in 4 samples 011b = 1 step in 8 samples 100b = 1 step in 16 samples 101b = 1 step in 32 samples 110b = 1 step in 64 samples 111b = 1 step in 128 samples
0	LIMB_EN	RW	0h	Limiter enable. 0b = Disabled 1b = Enabled

8.5.22 LIM_CFG_1 (page=0x00 address=0x13) [reset=76h]

Sets VBAT limiter release step size, release rate and hold time.

Table 121. Limiter Configuration 1 Field Descriptions

Bit	Field	Type	Reset	Description
7-6	LIMB_RLS_ST[1:0]	RW	1h	VBAT Limiter/BOP/ICLA release step size. 00b = 0.25 dB 01b = 0.5 dB 10b = 1 dB 11b = 2 dB

2-0	Reserved	R	0h	Reserved

8.5.45 BOOST_CFG4 (page=0x00 address=0x40) [reset=36h]

Boost Configure 4

Table 144. Boost Configure 4 Field Descriptions

Bit	Field	Type	Reset	Description
7-0	BST_SSL[7:0]	RW	0h	Boost peak current limit 00h = 0.99 A 01h = 1.045 A 02h = 1.1 A ... 0x36h = 3.96 A 0x37h = 4 A 0x38h-0x3Fh = Reserved

8.5.46 REV_ID (page=0x00 address=0x7D) [reset=0h]

Returns REV and PG ID.

Table 145. Revision and PG ID Field Descriptions

Bit	Field	Type	Reset	Description
7-4	REV_ID[3:0]	R	0h	Returns the revision ID.
3-0	PG_ID[3:0]	R	0h	Returns the PG ID.

8.5.47 I2C_CKSUM (page=0x00 address=0x7E) [reset=0h]

Returns I2C checksum.

Table 146. I2C Checksum Field Descriptions

Bit	Field	Type	Reset	Description
7-0	I2C_CKSUM[7:0]	RW	0h	Returns I2C checksum. Writing to this register will reset the checksum to the written value. This register is updated on writes to other registers on all books and pages.

8.5.48 BOOK (page=0x00 address=0x7F) [reset=0h]

Device's memory map is divided into pages and books. This register sets the book.

Table 147. Device Book Field Descriptions

Bit	Field	Type	Reset	Description
7-0	BOOK[7:0]	RW	0h	Sets the device book. 00h = Book 0 01h = Book 1 ... FFh = Book 255

8.5.49 PAGE1 (page=0x01 address=0x00) [reset=0h]

Device Page

Table 148. Device Page Field Descriptions

Bit	Field	Type	Reset	Description
7-0	PAGE[7:0]	RW	0h	Sets the device page. 00h = Page 0 01h = Page 1 ... FFh = Page 255

8.5.50 TF_CFG21 (page=0x01 address=0x08) [reset=40h]

Set the enable for thermal foldback

Table 149. Thermal Folder Configure Field Descriptions

Bit	Field	Type	Reset	Description
7	Reserved	R	0h	Reserved
6	TF_EN	RW	1h	Thermal Foldback is 0 = Disabled 1 = Enabled
5-0	Reserved	RW	0h	Reserved

8.5.51 PAGE2 (page=0x02 address=0x00) [reset=0h]

The device's memory map is divided into pages and books. This register sets the page.

Table 150. Device Page Field Descriptions

Bit	Field	Type	Reset	Description
7-0	PAGE[7:0]	RW	0h	Sets the device page. 00h = Page 0 01h = Page 1 ... FFh = Page 255

8.5.52 DVC_CFG1 (page=0x02 address=0x0C) [reset=40h]

Sets playback volume for PCM playback path.

Table 151. Digital Volume Control 1 Field Descriptions

Bit	Field	Type	Reset	Description
7-0	DVC_PCM[31:24]	RW	40h	$\text{round}(10^{(\text{volume in dB}/20)} \cdot 2^{30})$

8.5.53 DVC_CFG2 (page=0x02 address=0x0D) [reset=40h]

Sets playback volume for PCM playback path.

Table 152. Digital Volume Control 2 Field Descriptions

Bit	Field	Type	Reset	Description
7-0	DVC_PCM[23:16]	RW	40h	$\text{round}(10^{(\text{volume in dB}/20)} \cdot 2^{30})$

8.5.54 DVC_CFG3 (page=0x02 address=0x0E) [reset=0h]

Sets playback volume for PCM playback path.

Table 153. Digital Volume Control 3 Field Descriptions

Bit	Field	Type	Reset	Description
7-0	DVC_PCM[15:8]	RW	0h	$\text{round}(10^{(\text{volume in dB}/20)} \cdot 2^{30})$

8.5.55 DVC_CFG4 (page=0x02 address=0x0F) [reset=0h]

Sets playback volume for PCM playback path.

Table 154. Digital Volume Control 4 Field Descriptions

Bit	Field	Type	Reset	Description
7-0	DVC_PCM[7:0]	RW	0h	$\text{round}(10^{(\text{volume in dB}/20)} \cdot 2^{30})$

8.5.56 DVC_CFG5 (page=0x02 address=0x10) [reset=3h]

Sets ramp rate for volume control

Table 155. Digital Volume Control 5 Field Descriptions

Bit	Field	Type	Reset	Description
7-0	DVC_RAMP[31:24]	RW	3h	$\text{round}((1 - \exp(-1/(0.2 \cdot f_s \cdot \text{time in seconds}))) \cdot 2^{31})$

8.5.57 DVC_CFG6 (page=0x02 address=0x11) [reset=4Ah]

Sets ramp rate for volume control

Table 156. Digital Volume Control 6 Field Descriptions

Bit	Field	Type	Reset	Description
7-0	DVC_RAMP[23:16]	RW	4Ah	$\text{round}((1 - \exp(-1/(0.2 \cdot f_s \cdot \text{time in seconds}))) \cdot 2^{31})$

8.5.58 DVC_CFG7 (page=0x02 address=0x12) [reset=51h]

Sets ramp rate for volume control

Table 157. Digital Volume Control 7 Field Descriptions

Bit	Field	Type	Reset	Description
7-0	DVC_RAMP[15:8]	RW	51h	$\text{round}((1 - \exp(-1/(0.2 \cdot f_s \cdot \text{time in seconds}))) \cdot 2^{31})$

8.5.59 DVC_CFG7 (page=0x02 address=0x13) [reset=6Ch]

Sets ramp rate for volume control

Table 158. Digital Volume Control 8 Field Descriptions

9 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The TAS2110 is a digital input high efficiency Class-D audio power amplifier with advanced battery current management and an integrated Class-H boost converter. In auto passthrough mode, the Class-H boost converter generates the Class-D amplifier supply rail. During low Class-D output power, the boost improves efficiency by deactivating and connecting VBAT directly to the Class-D amplifier supply. When high power audio is required, the boost quickly activates to provide louder audio than a stand-alone amplifier connected directly to the battery. It is recommended to configure the TAS2110 using [PurePath™ Console 3 Software](#).

9.2 Typical Application

图 50. Typical Application - Digital Audio Input

表 272. Recommended External Components

COMPONENT	DESCRIPTION	SPECIFICATION	MIN	TYP	MAX	UNIT
L1	Boost Converter Inductor ⁽¹⁾	Inductance, 20% Tolerance	0.47	1		µH
		Saturation Current		4.5		A

(1) See section [Boost Converter Passive Devices](#) for additional requirements on derating, stability, and inductor value trade-offs.

Typical Application (接下页)

表 272. Recommended External Components (接下页)

COMPONENT	DESCRIPTION	SPECIFICATION	MIN	TYP	MAX	UNIT
R2,R3	EMI Filter Inductors (optional). These are not recommended as it degrades THD+N performance. TAS2110 is a filter-less Class-D and does not require these bead inductors.	Impedance at 100 MHz		120		Ω
		DC Resistance			0.095	Ω
		DC Current			2	A
		Size		0402		EIA
C1,C2,C3,C4	Boost Converter Input Capacitor ⁽¹⁾	Capacitance, 20% Tolerance	10			μF
C6,C7,C9,C15,C16	Boost Converter Output Capacitor	Type	X5R			
		Capacitance, 20% Tolerance	10		47	μF
		Rated Voltage	16			V
		Capacitance at 11.5 V derating	3.3			μF
C13,C14	EMI Filter Capacitors (optional, must use R2, R3 if C13, C14 used)	Capacitance		1		nF
C5,C8	VDD Decoupling Capacitor	Capacitance	4.7			μF
C11,C12	DREG Decoupling Capacitor	Capacitance	1			μF
C10	GREG Fly Capacitor	Capacitance	100			nF

9.2.1 Design Requirements

For given design example, use the parameters shown in [表 273](#)

表 273. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
Audio Input	Digital Audio, I ² S
Mono or Stereo Configuration	Mono
Max Output Power at 1% THD+N	5.0 W

9.2.2 Detailed Design Procedure

9.2.2.1 Mono/Stereo Configuration

In this application, the device is assumed to be operating in mono mode. See [Device Mode and Address Selection](#) for information on changing the I²C address of the TAS2110 to support stereo operation. Mono or stereo configuration does not impact the device performance.

9.2.2.2 Boost Converter Passive Devices

The boost converter requires three passive devices that are labeled L1, C1 and C2 in [图 50](#) and whose specifications are provided in [表 272](#). These specifications are based on the design of the TAS2110 and are necessary to meet the performance targets of the device. In particular, L1 should not be allowed to enter in the current saturation region. The saturation current for L1 should be $> I_{LIM}$ to deliver Class-D peak power.

Additionally, the ratio of L1/C2 (the derated value of C2 at 11.5 V should be used in this ratio) has to be lesser than 1/3 for boost stability. This 1/3 ratio should be maintained including the worst case variation of L1 and C2. To satisfy sufficient energy transfer, L1 needs to be $\geq 0.47 \mu\text{H}$ at the boost switching frequency (100 kHz to 4 MHz). Using a $0.47 \mu\text{H}$ will have more boost ripple than a $1.0 \mu\text{H}$ or $2.2 \mu\text{H}$ but the high PSRR should minimize the effect from the additional ripple. Finally, the minimum C2 (derated value at programmed boost voltage) should be $> 3.3 \mu\text{F}$ for Class-D power delivery specification.

9.2.2.3 EMI Passive Devices

The system designer may want to include passive devices on the Class-D output. These passive devices that are labeled L2, L3, C3 and C4 in [图 50](#) and their recommended specifications are provided in [表 272](#). If C3 and C4 are used, L2 and L3 must also be installed, and C3 and C4 must be placed after L2 and L3 respectively to maintain the stability of the output stage.

9.2.2.4 Miscellaneous Passive Devices

The GREG Capacitor requires 100 nF to meet boost and Class-D power delivery and efficiency specs. For best device performance, the GREG capacitor should be placed very close to the device, star connected to PVDD and be routed with wide traces to minimize the impact of PCB parasitic effects.

DREG Capacitor should be placed and Ground Loop closed next to device. DREG is internal supply(1.5V typical, functional min of 1.35V) generated from external VDD supply. For best performance, noise on VDD should be reduced by wide traces or higher caps on VDD next to device based on board routings.

9.2.3 Application Curves

10 Power Supply Recommendations

10.1 Power Supplies

The TAS2110 requires four power supplies:

- Boost Input (terminal: VBAT)
 - Voltage: 2.9 V to 5.5 V
 - Max Current: 5 A for ILIM = 4.0 A (default)
- Analog Supply (terminal: VDD)
 - Voltage: 1.65 V to 1.95 V
 - Max Current: 30 mA
- Internal Supplies
 - Digital Supply (terminal: DREG): 1.35 V to 1.65 V
 - Boost Output (terminal: VBST) : VBAT to 13V
 - Class-D Power Supply (terminal: PVDD): Short to VBST

The decoupling capacitors for the power supplies should be placed close to the device terminals.

10.2 Power Supply Sequencing

The power rail may be brought up and down in any order. There is no requirement on sequencing. However if VDD is present without VBAT an additional rise in VDD current will be observed until VBAT is present.

When the supplies have settled, the SDZ terminal can be set HIGH to operate the device. Additionally the SDZ pin can be tied to VDD and the internal POR will perform a reset of the device. After a hardware or software reset additional commands to the device should be delayed for 100 μ s to allow the OTP to load. The above sequence should be completed before any I²C operation.

In External PVDD Case, User need to ensure that PVDD does not drop below VBAT-0.7V.

10.2.1 Boost Supply Details

The boost supply (VBAT) and associated passives need to be able to support the current requirements of the device. By default, the peak current limit of the boost is set to 4 A. Refer to [表 86](#) for information on changing the current limit. A minimum of a 10 μ F capacitor is recommended on the boost supply to quickly support changes in required current. Refer to [图 50](#) for the schematic.

The current requirements can also be reduced by lowering the gain of the amplifier, or in response to decreasing battery through the use of the battery-tracking feature of the TAS2110 described in [Supply Tracking Limiters with Brown Out Prevention](#).

11 Layout

11.1 Layout Guidelines

- Place the boost inductor between VBAT and SW close to device terminals with no VIAS between the device terminals and the inductor.
- Place the capacitor between VBST and Ground close to device terminals with no VIAS between the device terminals and capacitor.
- Place the capacitor between VBAT and GND close to device terminals with no VIAS between the device terminals and capacitor.
- Minimize trace inductance between the GREG capacitor and TAS2564. This can be done by using multiple vias in parallel and by using wide routes where possible. This capacitor should have a star connection to PVDD.
- Do not use VIAS for traces that carry high current. These include the traces for VBST, SW, VBAT, PGND and the speaker OUT_P, OUT_M.
- SW, OUT_P and OUT_M are high switching nets and keep out should be kept from these signals to prevent corruption of digital signals.
- Use epoxy filled vias for the interior pads.
- EMI ferrites must be used if EMI capacitors are used on OUT_P, OUT_M.
- Use a ground plane with multiple vias for each terminal to create a low-impedance connection to GND for minimum ground noise.
- Use supply decoupling capacitors as shown in [图 50](#) and described in [Power Supplies](#).
- Place EMI ferrites, if used, close to the device.

表 274. Pin Layout Guidelines

PIN	MAX PARASITIC INDUCTANCE	LAYOUT RECOMMENDATIONS
BGND, GND, PGND, GNDD	150 pH	Short BGND, GND, GNDD, PGND below the package and connect them to PCB ground plane strongly through multiple vias. Minimize inductance as much as possible
DREG	500 pH	Bypass to GND with capacitor recommended in 表 272 . Do not connect to external load. Both ends of decoupling cap should see as low inductance as possible between this pin and gnd pins.
GREG	200 pH	Connect it to PVDD with a star connection and not to boost plane with recommended in 表 272 . Do not connect to external load.
PVDD	100 pH	Short it to VBST(boost) plane through strong conneciton. Connect it to GREG with a star connection and not to boost plane.
SW		Connect to VBAT with boost inductor recommended in 表 272 . Reduce parasitic capacitor and resistance for efficiency. Boost inductor should be as close as possible to the SW pin. Inductor should be connected to SW through thick plane. Traces should support currents up to device over-current limit.
VBAT	500 pH	Bypass to GND with capacitor recommended in 表 272 . Should be connected to inductor through thick plane. Both ends of decoupling capacitor should see as low inductance as possible between VBAT pin and PGND pin.
VBST	100 pH	Do not connect to external load. Bypass to GND with capacitor recommended in 表 272 . Connect to PVDD through thick plane. Both ends of decoupling capacitor should see as low inductance as possible between VBST pin and BGND pin. Traces should support currents up to device over-current limit.
VDD	200 pH	Bypass to GND with capacitor recommended in 表 272 . Both the end of decoupling cap should see as low inductance as possible between this pin and GND pin

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TAS2110RPPR	ACTIVE	VQFN-HR	RPP	32	3000	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	TAS2110	Samples
TAS2110RPPT	ACTIVE	VQFN-HR	RPP	32	250	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	TAS2110	Samples

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

⁽²⁾ **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
